

Week	Contents	Pages
1	The Ising model - Transfer matrix method of 1d Ising model	O01-O10
2	- Correlation functions - Phase transition at finite temperature (1d vs. 2d) - Mean field theory	O12-O23
3	- Behaviour near critical temperature - Solution of the 2d Ising model	O24-O34
4	- Connection between classical 2d and quantum 1d Ising model - Self-duality of the quantum Ising model Exact solution of the quantum Ising model - Jordan Wigner transformation	O35-O47
5	- Bogoliubov transformation Landau Theory - Order parameters and common features of mean field theories	O47-O51 N01-N10
6	- Continuous phase transitions - First order phase transition - Inhomogeneous systems	N11-N23
7	- Functional differentiation - Two-point correlation function - Breakdown of phenomenological Landau theory	N24-N35
8	- Gaussian fluctuations Critical exponents and scaling hypothesis - List of critical exponents - scaling relations and scaling functions	N36-N49
9	- Anomalous dimension Renormalisation group - Block spins - RG of 1d Ising model	N50-N60
10	- Fixed points and scaling fields - RG of 2d Ising model on square lattice Interacting Bose Einstein Condensate at zero temperature - Uniform interacting Bose gas	N61-N74
11	- Bogoliubov modes and excitation spectrum - Condensate depletion - Ground state energy Dynamics of the Ising model - Glauber and Kawasaki dynamics	N71-N82 O52-O58
12	- Coarsening Non-equilibrium processes and phase transitions - Contact process	O59-O74
13	- Domany-Kinzel cellular automata - Compact directed percolation universality	O75-O86
